

**PROJECT SPECIFICATION**  
**Payment Application**

**Development environment preparation**

CRITERIA	MEETS SPECIFICATIONS
Create modules folders	<ol style="list-style-type: none"><li>1. Create a new project</li><li>2. Create "Application" folder</li><li>3. Create "Card" folder</li><li>4. Create "Terminal" folder</li><li>5. Create "Server" folder</li></ol>
	<p>Note: To create a folder in Microsoft Visual Studio</p> <ol style="list-style-type: none"><li>1. In the solution explorer, right-click on the project name</li><li>2. Go to Add</li><li>3. Select Folder</li><li>4. Give a name to that folder</li></ol> <p>You should deliver a screenshot of the solution explorer that clarifies your folder structure.</p>
Create .c and .h file for each module	<ol style="list-style-type: none"><li>1. In the "Application" folder create <b>app.c</b> and <b>app.h</b> files</li><li>2. In the "Card" folder create <b>card.c</b> and <b>card.h</b> files</li><li>3. In the "Terminal" folder create <b>terminal.c</b> and <b>terminal.h</b> files</li></ol>

CRITERIA	MEETS SPECIFICATIONS
	<p>4. In the "Server" folder create <b>server.c</b> and <b>server.h</b> files</p> <p>Note: To create a file into a folder in Microsoft Visual Studio</p> <p>1. In the solution explorer, right-click on the folder you want 2. Go to Add 3. Select New Item 4. Select file type, .cpp or .h 5. If a .cpp is chosen, change the extension to .c 6. Give a name to that file"</p> <p>You should deliver a screenshot of the solution explorer that clarifies files in each folder.</p>
Add header file gaurd	<p>1. In the <b>app.h</b> file add the header file guard 2. In the <b>card.h</b> file add the header file guard 3. In the <b>terminal.h</b> file add the header file guard 4. In <b>server.h</b> file add the header file guard</p> <p>You should deliver a screenshot for each .h file, the file name must appear in the screenshot, and the header file guard</p>

## Implement the card module

CRITERIA	MEETS SPECIFICATIONS
Fill in card.h file with functions' prototypes and typedefs	<p>1. Use the following typedef as-is:</p> <pre data-bbox="719 333 1351 608"> <b>typedef struct ST_cardData_t</b> {     <b>uint8_t</b> cardHolderName[25];     <b>uint8_t</b> primaryAccountNumber[20];     <b>uint8_t</b> cardExpirationDate[6]; }ST_cardData_t; </pre> <pre data-bbox="719 692 1351 925"> <b>typedef enum EN_cardError_t</b> {     CARD_OK, WRONG_NAME, WRONG_EXP_DATE,     WRONG_PAN }EN_cardError_t; </pre>
	<p>2. Use the following prototypes as is:</p> <pre data-bbox="719 1030 1351 1284"> EN_cardError_t getCardHolderName(ST_cardData_t *cardData); EN_cardError_t getCardExpiryDate(ST_cardData_t *cardData); EN_cardError_t getCardPAN(ST_cardData_t *cardData); </pre>
	<p>You should deliver a screenshot of your card.h file</p>
Implement getCardHolderName function	<ol style="list-style-type: none"> <li>1. This function will ask for the <b>cardholder's name</b> and <b>store it into card data</b>.</li> <li>2. Cardholder name is <b>24 alphabetic characters string max and 20 min.</b></li> <li>3. If the cardholder name is <b>NULL</b>, <b>less than 20 characters or more than 24</b> will return a <b>WRONG_NAME</b> error, else return <b>CARD_OK</b>.</li> <li>4. Test your function:</li> </ol>

CRITERIA	MEETS SPECIFICATIONS
	<ul style="list-style-type: none"> <li>o Create a test function  <code>void getCardHolderNameTest(void);</code>            to test all possible scenarios, happy-case, and worst-case scenarios.</li> <li>o Print all results of your test cases on the console window, use the following as a guide:</li> </ul> <div style="border: 1px solid black; padding: 10px;"> <p>Tester Name: your name            Function Name: getCardHolderName    <b>Test Case 1:</b>            Input Data:            Expected Result:            Actual Result:    <b>Test Case 2:</b>            Input Data:            Expected Result:            Actual Result:              .            .            .    <b>Test Case n:</b>            Input Data:            Expected Result:            Actual Result:</p> </div> <p>5. You should deliver the test function as well as a screenshot of the results on the console.</p>
Implement <code>getCardExpiryDate</code> function	<ol style="list-style-type: none"> <li>1. This function will ask for the <b>card expiry date</b> and store it in <b>card data</b>.</li> <li>2. Card expiry date is <b>5 characters</b> string in the format "MM/YY", e.g "05/25".</li> <li>3. If the card expiry date is <b>NULL</b>, <b>less or more than 5 characters</b>, or has the <b>wrong format</b> will</li> </ol>

CRITERIA	MEETS SPECIFICATIONS
	<p>return the <code>WRONG_EXP_DATE</code> error, else return <code>CARD_OK</code>.</p> <p>4. Test your function:</p> <ul style="list-style-type: none"> <li>o Create a test function  <code>void getCardExpiryDateTest (void);</code>            to test all possible scenarios, happy-case, and worst-case scenarios.</li> <li>o Print all results of your test cases on the console window, use the following as a guide:</li> </ul> <div style="border: 1px solid black; padding: 10px;"> <pre>Tester Name: your name Function Name: getCardExpiryDate Test Case 1: Input Data: Expected Result: Actual Result: Test Case 2: Input Data: Expected Result: Actual Result: . . . Test Case n: Input Data: Expected Result: Actual Result:</pre> </div> <p>5. You should deliver the test function as well as a screenshot of the results on the console.</p>
Implement <code>getCardPAN</code> function	<p>1. This function will ask for the card's Primary Account Number and store it in card data.</p> <p>2. PAN is 20 numeric characters string, 19 character max, and 16 character min.</p>

CRITERIA	MEETS SPECIFICATIONS
	<p>3. If the PAN is <code>NULL</code>, less than 16 or more than 19 characters, will return the <code>WRONG_PAN</code> error, else return <code>CARD_OK</code>.</p> <p>4. Test your function:</p> <ul style="list-style-type: none"> <li>o Create a test function  <code>void getCardPANTest (void);</code> to test all possible scenarios, happy-case, and worst-case scenarios.</li> <li>o Print all results of your test cases on the console window, use the following as a guide:</li> </ul> <div style="border: 1px solid black; padding: 10px;"> <p>Tester Name: your name</p> <p>Function Name: getCardPAN</p> <p>Test Case 1:</p> <p>Input Data:</p> <p>Expected Result:</p> <p>Actual Result:</p> <p>Test Case 2:</p> <p>Input Data:</p> <p>Expected Result:</p> <p>Actual Result:</p> <p>.</p> <p>.</p> <p>.</p> <p>Test Case n:</p> <p>Input Data:</p> <p>Expected Result:</p> <p>Actual Result:</p> </div> <p>5. You should deliver the test function as well as a screenshot of the results on the console.</p>
Explain your work	<ol style="list-style-type: none"> <li>1. Record a video where you discuss each function you implemented in this module.</li> <li>2. Explain and execute all test functions you made.</li> <li>3. The video is <b>4 minutes maximum</b>.</li> </ol>

CRITERIA	MEETS SPECIFICATIONS
	<p>4. You may record it in Arabic or English.</p> <p>5. Muted videos will not be acceptable.</p> <p>6. <b>All of the above are mandatory to pass this criterion.</b></p>

## Implement the terminal module

CRITERIA	MEETS SPECIFICATIONS
<p>Fill in terminal.h file with functions' prototypes and typedefs</p>	<p>1. Use the following typedef as is:</p> <pre data-bbox="747 819 1428 1115"> <b>typedef struct ST_terminalData_t</b> {     float transAmount;     float maxTransAmount;     uint8_t transactionDate[11]; }ST_terminalData_t;</pre> <p data-bbox="747 1157 1428 1495"> <b>typedef enum EN_terminalError_t</b> {     TERMINAL_OK, WRONG_DATE, EXPIRED_CARD,     INVALID_CARD, INVALID_AMOUNT, EXCEED_MAX_AM     OUNT, INVALID_MAX_AMOUNT }EN_terminalError_t ; </p> <p>2. Use the following prototypes as is:</p> <pre data-bbox="747 1579 1428 2031"> EN_terminalError_t getTransactionDate(ST_te rminalData_t *termData); EN_terminalError_t isCardExpired(ST_cardDat a_t *cardData, ST_terminalData_t *termDat a); EN_terminalError_t getTransactionAmount(ST_ terminalData_t *termData); EN_terminalError_t isBelowMaxAmount(ST_term inalData_t *termData); EN_terminalError_t setMaxAmount(ST_terminal</pre>

CRITERIA	MEETS SPECIFICATIONS
	<pre data-bbox="768 240 1393 354"><code>Data_t *termData, float maxAmount); EN_terminalError_t isValidCardPAN(ST_cardData_t *cardData); // Optional</code></pre> <p data-bbox="714 388 1429 466">3. You should deliver a screenshot for your terminal.h file</p>
Implement getTransactionDate function	<p data-bbox="714 620 1408 699">1. This function will ask for the transaction date and store it in terminal data.</p> <p data-bbox="714 709 1356 787">2. Transaction date is 10 characters string in the format DD/MM/YYYY, e.g 25/06/2022.</p> <p data-bbox="714 798 1383 925">3. If the transaction date is <code>NULL</code> or is less than 10 characters or wrong format will return the <code>WRONG_DATE</code> error, else return <code>TERMINAL_OK</code>.</p> <p data-bbox="714 935 997 967">4. Test your function:</p> <ul data-bbox="801 1015 1148 1047" style="list-style-type: none"> <li data-bbox="801 1015 1148 1047">o Create a test function</li> </ul> <pre data-bbox="850 1068 1334 1094"><code>void getTransactionDateTest(void);</code></pre> <p data-bbox="842 1104 1323 1182">to test all possible scenarios, happy-case, and worst-case scenarios.</p> <ul data-bbox="801 1193 1323 1320" style="list-style-type: none"> <li data-bbox="801 1193 1323 1320">o Print all results of your test cases on the console window, and use the following as a guide:</li> </ul> <div data-bbox="860 1353 1334 1997" style="border: 1px solid black; padding: 10px;"> <pre data-bbox="860 1353 1334 1997"> Tester Name: your name Function Name: getTransactionDate Test Case 1: Input Data: Expected Result: Actual Result: Test Case 2: Input Data: Expected Result: Actual Result: . . . Test Case n:</pre> </div>

CRITERIA	MEETS SPECIFICATIONS
	<p>Input Data: Expected Result: Actual Result:</p> <p><b>5. Optional:</b> The function will read the current date from your computer and store it into terminal data with the mentioned size and format.</p> <p>6. You should deliver the test function as well as a screenshot of the results on the console.</p>
Implement isCardExpired function	<p>1. This function <b>compares the card expiry date with the transaction date</b>.</p> <p>2. If the card <b>expiration date is before</b> the transaction date will return <code>EXPIRED_CARD</code>, else return <code>TERMINAL_OK</code>.</p> <p>3. Test your function:</p> <ul style="list-style-type: none"> <li>o Create a test function  <code>void isCardExpiredTest(void);</code> to test all possible scenarios, happy-case, and worst-case scenarios.</li> <li>o Print all results of your test cases on the console window, and use the following as a guide:</li> </ul> <p>Tester Name: your name  Function Name: isCardExpired  Test Case 1:  Input Data:  Expected Result:  Actual Result:  Test Case 2:  Input Data:  Expected Result:  Actual Result:  •  •  •</p>

CRITERIA	MEETS SPECIFICATIONS
	<p>Test Case n:</p> <p>Input Data:</p> <p>Expected Result:</p> <p>Actual Result:</p> <p>4. You should deliver the test function as well as a screenshot of the results on the console.</p>
Implement getTransactionAmount function	<p>1. This function asks for the <b>transaction amount</b> and saves it into terminal data.</p> <p>2. If the transaction amount is <b>less than or equal to 0</b> will return <code>INVALID_AMOUNT</code>, else return <code>TERMINAL_OK</code>.</p> <p>3. Test your function:</p> <ul style="list-style-type: none"> <li>o Create a test function  <code>void getTransactionAmountTest(void);</code>            to test all possible scenarios, happy-case, and worst-case scenarios.</li> <li>o Print all results of your test cases on the console window, and use the following as a guide:</li> </ul> <div style="border: 1px solid black; padding: 10px;"> <p>Tester Name: your name</p> <p>Function Name: getTransactionAmount</p> <p>Test Case 1:</p> <p>Input Data:</p> <p>Expected Result:</p> <p>Actual Result:</p> <p>Test Case 2:</p> <p>Input Data:</p> <p>Expected Result:</p> <p>Actual Result:</p> <p>.</p> <p>.</p> <p>.</p> <p>Test Case n:</p> </div>

CRITERIA	MEETS SPECIFICATIONS
	<p>Input Data: Expected Result: Actual Result:</p> <p>4. You should deliver the test function as well as a screenshot of the results on the console.</p>
Implement isBelowMaxAmount function	<p>1. This function <b>compares the transaction amount with the terminal max allowed amount</b>.</p> <p>2. If the transaction amount is <b>larger than the terminal max allowed amount</b> will return <code>EXCEED_MAX_AMOUNT</code>, else return <code>TERMINAL_OK</code>.</p> <p>3. Test your function:</p> <ul style="list-style-type: none"> <li>o Create a test function <code>void isBelowMaxAmountTest(void);</code> to test all possible scenarios, happy-case, and worst-case scenarios.</li> <li>o Print all results of your test cases on the console window, and use the following as a guide:</li> </ul> <div style="border: 1px solid black; padding: 10px;"> <p>Tester Name: your name      Function Name: isBelowMaxAmount      Test Case 1:      Input Data:      Expected Result:      Actual Result:      Test Case 2:      Input Data:      Expected Result:      Actual Result:      .      .      .      Test Case n:      Input Data:</p> </div>

CRITERIA	MEETS SPECIFICATIONS
	<p>Expected Result: Actual Result:</p> <p>4. You should deliver the test function as well as a screenshot of the results on the console.</p>
Implement setMaxAmount function	<p>1. This function takes the maximum allowed amount and stores it into terminal data.</p> <p>2. Transaction max amount is a float number.</p> <p>3. If transaction max amount less than or equal to 0 will return the <code>INVALID_MAX_AMOUNT</code> error, else return <code>TERMINAL_OK</code>.</p> <p>4. Test your function:</p> <ul style="list-style-type: none"> <li>o Create a test function  <code>void setMaxAmountTest(void);</code> to test all possible scenarios, happy-case, and worst-case scenarios.</li> <li>o Print all results of your test cases on the console window, and use the following as a guide:</li> </ul> <div style="border: 1px solid black; padding: 10px;"> <p>Tester Name: your name</p> <p>Function Name: setMaxAmount</p> <p>Test Case 1:</p> <p>Input Data:</p> <p>Expected Result:</p> <p>Actual Result:</p> <p>Test Case 2:</p> <p>Input Data:</p> <p>Expected Result:</p> <p>Actual Result:</p> <p>.</p> <p>.</p> <p>.</p> <p>Test Case n:</p> <p>Input Data:</p> </div>

CRITERIA	MEETS SPECIFICATIONS
	<p>Expected Result: Actual Result:</p> <p>5. You should deliver the test function as well as a screenshot of the results on the console.</p>
Implement isValidCardPAN function (Optional)	<p>1. This function will <b>check if the PAN is a Luhn number or not</b>.</p> <p>2. For more about <b>Luhn number</b>, and how to generate and check please refer to this <a href="#">Site</a>.</p> <p>3. If the number is not Luhn number, will return <code>INVALID_CARD</code>, else will return <code>TERMINAL_OK</code>.</p> <p>4. Test your function:</p> <ul style="list-style-type: none"> <li>o Create a test function  <code>void isValidCardPANTest(void);</code> to test all possible scenarios, happy-case, and worst-case scenarios.</li> <li>o Print all results of your test cases on the console window, and use the following as a guide:</li> </ul> <pre>Tester Name: your name Function Name: isValidCardPAN Test Case 1: Input Data: Expected Result: Actual Result: Test Case 2: Input Data: Expected Result: Actual Result: . . . Test Case n: Input Data:</pre>

CRITERIA	MEETS SPECIFICATIONS
	<p>Expected Result: Actual Result:</p> <p>5. If you are going to implement this function, please deliver the test function as well as a screenshot of the results on the console.</p>
Explain your work	<p>1. Record a video where you discuss each function you implemented in this module.</p> <p>2. Explain and execute all test functions you made.</p> <p>3. The video is <b>4 minutes maximum</b>.</p> <p>4. You may record it in Arabic or English.</p> <p>5. Muted videos will not be acceptable.</p> <p>6. <b>All of the above are mandatory to pass this criterion.</b></p>

## Implement the server module

CRITERIA	MEETS SPECIFICATIONS
Fill in server.h file with functions' prototypes and typedefs	<p>1. Use the following typedef as-is:</p> <pre data-bbox="752 1396 1437 1706"><code>typedef enum EN_transState_t {     APPROVED, DECLINED_INSUFFICIENT_FUND, DECLINED_STOLEN_CARD, FRAUD_CARD, INTERNAL_SERVER_ERROR }EN_transStat_t;</code></pre> <pre data-bbox="752 1748 1437 1987"><code>typedef struct ST_transaction_t {     ST_cardData_t cardHolderData;     ST_terminalData_t terminalData;     EN_transState_t transState;</code></pre>

CRITERIA	MEETS SPECIFICATIONS
	<pre>        uint32_t transactionSequenceNumber; }ST_transaction;</pre>
	<pre>typedef enum EN_serverError_t {     SERVER_OK, SAVING_FAILED, TRANSACTION_NOT_FOUND,     ACCOUNT_NOT_FOUND, LOW_BALANCE, BLOCKED_ACCOUNT }EN_serverError_t ;</pre>
	<pre>typedef enum EN_accountState_t {     RUNNING,     BLOCKED }EN_accountState_t;</pre>
	<pre>typedef struct ST_accountsDB_t {     float balance;     EN_accountState_t state;     uint8_t primaryAccountNumber[20]; }ST_accountsDB_t;</pre>
2. Use the following prototypes as is:	<pre>EN_transState_t recieveTransactionData(ST_transaction_t *transData); EN_serverError_t isValidAccount(ST_cardData_t *cardData, ST_accountsDB_t *accountReference); EN_serverError_t isBlockedAccount(ST_accountsDB_t *accountReference); EN_serverError_t isAmountAvailable(ST_terminalData_t *termData, ST_accountsDB_t *accountReference); EN_serverError_t saveTransaction(ST_transaction_t *transData); void listSavedTransactions(void);</pre>

CRITERIA	MEETS SPECIFICATIONS
	<p>3. You should deliver a screenshot for your server.h file.</p>
Implement server-side accounts' database	<p>1. Create a global array of <code>ST_accountsDB_t</code> for the valid accounts database.  <code>ST_accountsDB_t accountsDB[255];</code></p> <p>2. Fill in the array initially with any <b>valid data</b>.</p> <p>3. This array has a <b>maximum of 255</b> element/account data.</p> <p>4. You can fill up to 10 different accounts for the sake of testing.</p> <p>5. Example of a <b>running</b> account:  <code>{2000.0, RUNNING, "8989374615436851"}.</code></p> <p>6. Example of a <b>blocked</b> account, its card is stolen:  <code>{100000.0, BLOCKED, "5807007076043875"}.</code></p> <p>7. You should deliver a screenshot of your accounts database array with a minimum of at least 5 different accounts for the different test cases, check all needed test cases in the "<b>Testing the application</b>" section.</p>
Implement server-side transactions' database	<p>1. Create a global array of <code>ST_transaction_t</code>.</p> <p>2. Fill in the array <b>initially with Zeros</b>.</p> <p>3. This array has a <b>maximum of 255 element/transaction data</b>.</p> <p>4. You should deliver a screenshot of your transaction database array</p>
Implement <code>recieveTransactionData</code> function	<p>1. This function will <b>take all transaction data and validate its data</b>, it contains all server logic.</p> <p>2. It checks the account details and amount availability.</p> <p>3. If the account <b>does not exist</b> return <code>FRAUD_CARD</code>, if the amount is not available will return <code>DECLINED_INSUFFICIENT_FUND</code>, if the account is <b>blocked</b> will return <code>DECLINED_STOLEN_CARD</code>, if a</p>

CRITERIA	MEETS SPECIFICATIONS
	<p>transaction can't be saved will return <code>INTERNAL_SERVER_ERROR</code>, else returns <code>APPROVED</code>.</p> <p>4. It will update the database with the new balance.</p> <p>5. Test your function:</p> <ul style="list-style-type: none"> <li>◦ Create a test function  <code>void recieveTransactionDataTest(void);</code>            to test all possible scenarios, happy-case, and worst-case scenarios.</li> <li>◦ Print all results of your test cases on the console window, and use the following as a guide:</li> </ul> <div style="border: 1px solid black; padding: 10px;"> <p>Tester Name: your name</p> <p>Function Name: recieveTransactionD ata</p> <p>Test Case 1:</p> <p>Input Data:</p> <p>Expected Result:</p> <p>Actual Result:</p> <p>Test Case 2:</p> <p>Input Data:</p> <p>Expected Result:</p> <p>Actual Result:</p> <p>.</p> <p>.</p> <p>.</p> <p>Test Case n:</p> <p>Input Data:</p> <p>Expected Result:</p> <p>Actual Result:</p> </div> <p>6. You should deliver the test function as well as a screenshot of the results on the console.</p>
Implement <code>isValidAccount</code> function	1. This function will take card data and validate if the account related to this card exists or not.

CRITERIA	MEETS SPECIFICATIONS
	<p>2. It checks if the PAN exists or not in the server's database (searches for the card PAN in the DB).</p> <p>3. If the PAN doesn't exist will return <code>ACCOUNT_NOT_FOUND</code> and the account reference will be <code>NULL</code>, else will return <code>SERVER_OK</code> and return a reference to this account in the DB.</p> <p>4. Test your function:</p> <ul style="list-style-type: none"> <li>◦ Create a test function <code>void isValidAccountTest(void);</code> to test all possible scenarios, happy-case, and worst-case scenarios.</li> <li>◦ Print all results of your test cases on the console window, and use the following as a guide:</li> </ul> <pre style="border: 1px solid black; padding: 10px;"> Tester Name: your name Function Name: isValidAccount Test Case 1: Input Data: Expected Result: Actual Result: Test Case 2: Input Data: Expected Result: Actual Result: . . . Test Case n: Input Data: Expected Result: Actual Result: </pre> <p>5. You should deliver the test function as well as a screenshot of the results on the console.</p>

CRITERIA	MEETS SPECIFICATIONS
Implement isBlockedAccount function	<p>1. This function takes a reference to the account into the database and verifies if it is blocked or not.</p> <p>2. If the account is running it will return <code>SERVER_OK</code>, else if the account is blocked it will return <code>BLOCKED_ACCOUNT</code>.</p> <p>3. Test your function:</p> <ul style="list-style-type: none"> <li>◦ Create a test function <code>void isBlockedAccountTest(void);</code> to test all possible scenarios, happy-case, and worst-case scenarios.</li> <li>◦ Print all results of your test cases on the console window, and use the following as a guide:</li> </ul> <pre style="border: 1px solid black; padding: 10px;"> Tester Name: your name Function Name: isBlockedAccount Test Case 1: Input Data: Expected Result: Actual Result: Test Case 2: Input Data: Expected Result: Actual Result: . . .  Test Case n: Input Data: Expected Result: Actual Result:</pre> <p>4. You should deliver the test function as well as a screenshot of the results on the console.</p>

CRITERIA	MEETS SPECIFICATIONS
Implement isAmountAvailable function	<p>1. This function will take terminal data and a reference to the account in the database and check if the account has a sufficient amount to withdraw or not.</p> <p>2. It checks if the transaction's amount is available or not.</p> <p>3. If the transaction amount is greater than the balance in the database will return <code>LOW_BALANCE</code>, else will return <code>SERVER_OK</code>.</p> <p>4. Test your function:</p> <ul style="list-style-type: none"> <li>◦ Create a test function  <code>void isAmountAvailableTest(void);</code> to test all possible scenarios, happy-case, and worst-case scenarios.</li> <li>◦ Print all results of your test cases on the console window, and use the following as a guide:</li> </ul> <div style="border: 1px solid black; padding: 10px; margin-top: 10px;"> <p>Tester Name: your name</p> <p>Function Name: isAmountAvailable</p> <p>Test Case 1:</p> <p>Input Data:</p> <p>Expected Result:</p> <p>Actual Result:</p> <p>Test Case 2:</p> <p>Input Data:</p> <p>Expected Result:</p> <p>Actual Result:</p> <p>.</p> <p>.</p> <p>.</p> <p>Test Case n:</p> <p>Input Data:</p> <p>Expected Result:</p> <p>Actual Result:</p> </div> <p>5. You should deliver the test function as well as a screenshot of the results on the console.</p>

CRITERIA	MEETS SPECIFICATIONS
Implement saveTransaction function	<p>1. This function will store all transaction data in the transactions database.</p> <p>2. It gives a sequence number to a transaction, this number is incremented once a transaction is processed into the server, you must check the last sequence number in the server to give the new transaction a new sequence number.</p> <p>3. It saves any type of transaction, APPROVED, DECLINED_INSUFFICIENT_FUND, DECLINED_STOLEN_CARD, FRAUD_CARD, INTERNAL_SERVER_ERROR.</p> <p>4. It will list all saved transactions using the listSavedTransactions function.</p> <p>5. Assuming that the connection between the terminal and server is always connected, then it will return SERVER_OK.</p> <p>6. Test your function:</p> <ul style="list-style-type: none"> <li>◦ Create a test function void saveTransactionTest(void); to test all possible scenarios, happy-case, and worst-case scenarios.</li> <li>◦ Print all results of your test cases on the console window, and use the following as a guide:</li> </ul> <pre>Tester Name: your name Function Name: saveTransaction Test Case 1: Input Data: Expected Result: Actual Result: Test Case 2: Input Data: Expected Result: Actual Result: . . . Test Case n:</pre>

CRITERIA	MEETS SPECIFICATIONS
	<p>Input Data: Expected Result: Actual Result:</p> <p>7. You should deliver the test function as well as a screenshot of the results on the console.</p>
Implement listSavedTransactions function	<p>1. This function <b>prints</b> all transactions found in the transactions DB.</p> <p>2. Please follow the following format for only one transaction data:</p> <pre>##### Transaction Sequence Number: Transaction Date: Transaction Amount: Transaction State: Terminal Max Amount: Cardholder Name: PAN: Card Expiration Date: #####</pre> <p>3. Test your function:</p> <ul style="list-style-type: none"> <li>○ Create a test function</li> </ul> <pre>void listSavedTransactionsTest(void);</pre> <p>to test all possible scenarios, happy-case, and worst-case scenarios.</p> <ul style="list-style-type: none"> <li>○ Print all results of your test cases on the console window, and use the following as a guide:</li> </ul> <pre>Tester Name: your name Function Name: listSavedTransactions Test Case 1: Input Data: Expected Result:</pre>

CRITERIA	MEETS SPECIFICATIONS
	<p>Actual Result:  Test Case 2:  Input Data:  Expected Result:  Actual Result:  .  .  .  Test Case n:  Input Data:  Expected Result:  Actual Result:</p>
Explain your work	<p>4. You should deliver the test function as well as a screenshot of the results on the console.</p> <ol style="list-style-type: none"> <li>Record a video where you discuss each function you implemented in this module.</li> <li>Explain and execute all test functions you made.</li> <li>The video is <b>4 minutes maximum</b>.</li> <li>You may record it in Arabic or English.</li> <li>Muted videos will not be acceptable.</li> <li><b>All of the above are mandatory to pass this criterion.</b></li> </ol>

## Implement the application

CRITERIA	MEETS SPECIFICATIONS
Fill in application.h file with functions' prototypes	<p>1. Use the following prototypes as-is:</p> <pre data-bbox="616 1797 1334 1896"><code>void appStart(void);</code></pre>

CRITERIA	MEETS SPECIFICATIONS
	2. You should deliver a screenshot for your application.h file.
Implement appStart function	<p>1. Please refer to the <b>flow chart</b> attached under the <b>instructions video</b> in order to implement this application.</p> <p>2. You should deliver <b>all project folders and files</b>.</p>
Explain your work	<p>1. Record a video where you discuss each function you implemented in this module.</p> <p>2. The video is <b>2 minutes maximum</b>.</p> <p>3. You may record it in Arabic or English.</p> <p>4. Muted videos will not be acceptable.</p> <p>5. <b>All of the above are mandatory to pass this criterion.</b></p>

## Testing the application

CRITERIA	MEETS SPECIFICATIONS
Transaction approved user story	<p>1. As a bank customer have an account and has a <b>valid</b> and <b>not expired card</b>, I want to withdraw an <b>amount</b> of money <b>less than the maximum allowed</b> and <b>less than or equal to the amount in my balance</b>, so that I am expecting that the transaction is <b>approved</b> and my <b>account balance is reduced by the withdrawn amount</b>.</p> <p>2. You should deliver a screenshot of the test result on the console.</p>
Exceed the maximum	<p>1. As a bank customer have an account, that has a <b>valid</b> and <b>not expired card</b>, I want to withdraw an amount of</p>

CRITERIA	MEETS SPECIFICATIONS
amount user story	<p>money that <b>exceeds the maximum allowed amount</b> so that I am expecting the transaction <b>declined</b>.</p> <p>2. You should deliver a screenshot of the test result on the console.</p>
Insufficient fund user story	<p>1. As a bank customer have an account and has a <b>valid and not expired card</b>, I want to withdraw an amount of money <b>less than the maximum allowed and larger than the amount in my balance</b> so that I am expecting that the transaction <b>declined</b>.</p> <p>2. You should deliver a screenshot of the test result on the console.</p>
Expired card user story	<p>1. As a bank customer have an account and a <b>valid but expired card</b>, I want to withdraw an amount of money so that I expect that the transaction <b>declined</b>.</p> <p>2. You should deliver a screenshot of the test result on the console.</p>
Stolen card user story	<p>1. As a bank customer have an account and has a <b>valid and not expired but stolen card</b>, I want to block anyone from using my card so that I am expecting that any transaction made by this card is <b>declined</b>.</p> <p>2. You should deliver a screenshot of the test result on the console.</p>
Explain your work	<p>1. Record a video where you discuss each test case.</p> <p>2. The video is <b>4 minutes maximum</b>.</p> <p>3. You may record it in Arabic or English.</p> <p>4. Muted videos will not be acceptable.</p> <p>5. <b>All of the above are mandatory to pass this criterion.</b></p>

## Suggestions to Make Your Project Stand Out!

1. In getCardPAN function:
  - Provide the PAN as a Luhn number.
2. Implement all optional functions.
3. For the server-side accounts DB:
  - Instead of a global array create a text file "Accounts DB.txt" that stores all account data and read this file into your application.
4. For server-side transactions DB:
  - Instead of a global array create a text file "Transactions DB.txt" where you will save all transactions and read if you need.
5. Test your application against the Fraud card:
  - As a bank administrator, I want to issue my own cards, so I am expecting that any transaction made by any fraud card (failed in Luhn check) is declined.
